Profile

Master's student in Computer Science and Engineering (Security and Privacy) at NOVA FCT with professional experience shipping a production HTML5 game as part of a small remote team. Comfortable across the stack, from Svelte/WebGL frontends to Node.js tooling and Java/Spring backends, with current research work on LLM-based text anonymization.

Education

Master's in Computer Science and Engineering Sep. 2025 – July 2027 (expected)
NOVA School of Science and Technology (FCT NOVA) *Caparica, Portugal*

- Specialization in Security and Privacy, secondary concentration in Trustworthy Software Development
- Current average: 15.55/20 (first year completed, 60 ECTS)
- Selected coursework: Systems Privacy (19), Advanced Applied Cryptography (17), Software Security (16), Software Verification (16), Distributed Algorithms (16)
- MSc thesis (ongoing): *Creating a risk-based unstructured data anonymization method using LLMs*, supervised by Prof. Kevin Gallagher. Developing LLM-powered anonymization of unstructured court documents, guided by risk-based anonymization metrics, so courts can publish decisions without exposing personal data

Bachelor's in Computer Science and Engineering Sep. 2022 – July 2025
NOVA School of Science and Technology (FCT NOVA) *Caparica, Portugal*

- Core foundations: data structures and algorithms, object-oriented programming, operating systems, databases, computer networks, distributed systems, software engineering, and artificial intelligence

High School Sep. 2019 – July 2022
Colégio Guadalupe *Verdizela, Portugal*

- Final average: 17.44/20

Experience

Web Game Developer June 2026 – Present
Independent three-person studio *Remote*

- Co-developed and shipped a production HTML5 game to a high-traffic online gaming platform
- Built the gameplay UI and animation flows in Svelte and TypeScript on a PixiJS (WebGL) rendering pipeline
- Led the platform certification process and the release tooling (reproducible builds, automated pre-release checks)

Full-Stack Developer, EmberShields Jan. 2025 – July 2025
Land management platform, NOVA FCT and municipal partnership *Caparica, Portugal*

- Built a web and mobile platform for sustainable land management in a 5-person team with local municipal authorities, graded 18/20 (12 ECTS)
- Worked on GeoJSON mapping, offline-capable field data collection, JWT authentication, and role-based access control. Stack: Flutter, Spring Boot, PostgreSQL, Docker

Technical Skills

Programming Languages: Java (primary), Python, JavaScript/TypeScript, C, OCaml, SQL, HTML/CSS
Frameworks and Libraries: Spring, Node.js, Svelte, PixiJS (WebGL), RESTful APIs
Developer Tools: Git/GitHub, Docker, Bash, SSH, Google Cloud Platform, Maven, IntelliJ IDEA, VS Code, LaTeX
Languages: Portuguese (native), English (fluent), Spanish (intermediate)

Interests

PC building and performance tuning, from component selection to overclocking, undervolting and cooling optimization. Modding and tweaking software to understand how it works and make it run better.
